Project Euler #2: Even Fibonacci numbers

This problem is a programming version of Problem 2 from projecteuler.net

Each new term in the Fibonacci sequence is generated by adding the previous two terms. By starting with ${\bf 1}$ and ${\bf 2}$, the first ${\bf 10}$ terms will be:

$$1, 2, 3, 5, 8, 13, 21, 34, 55, 89, \cdots$$

By considering the terms in the Fibonacci sequence whose values do not exceed N, find the sum of the even-valued terms.

Input Format

First line contains T that denotes the number of test cases. This is followed by T lines, each containing an integer, N.

Constraints

- $1 \leqslant T \leqslant 10^5$
- $10 \le N \le 4 \times 10^{16}$

Output Format

Print the required answer for each test case.

Sample Input 0

```
2
10
100
```

Sample Output 0

```
10
44
```

Explanation 0

- For N = 10, we have $\{2, 8\}$, sum is 10.
- \bullet For N=100, we have $\{2,8,34\}$, sum is 44.
